Soorten keramische tegels

Keramische tegels zijn momenteel de meest gekozen tegels, al dan niet in combinatie met een gebakken klinker. De tegels zijn eenvoudig te verwerken, erg sterk en ook vorstbestendig. In tegenstelling tot natuursteen en betontegels zijn keramische tegels krasvast door het bakken op extreem hoge temperatuur en door het verschil in materiaal. Keramische tegels ontstaan door het bakken van klei, betontegels zijn gemaakt van cement en kleurstof. Een keramische tegel verandert na verloop van tijd niet van kleur, wat bij beton en natuursteen wél het geval is. De keramische tegels zijn door hun kwaliteit onderhoudsarm en kunnen schoon gemaakt worden met water en eventueel zeep. Hierbij mag zelfs een hogedrukspuit gebruikt worden. Bij betontegels is dit niet aan te raden; vuil en groen zal sneller terugkomen omdat de hogedrukspuit de tegel aantast.

Er zijn vijf soorten keramische tegels op de kt:

- 2 centimeter dikke volkeramische tegels;
- 3 centimeter dikke volkeramische tegels;
- 4 centimeter dikke tegel waarvan 1 cm keramiek en 3 cm beton;
- 5 centimeter dikke tegel waarvan 1 cm keramiek en 4 cm beton;
- 6 centimeter dikke tegels waarvan 1 cm keramiek en 5 cm beton (deze zijn te gebruiken voor een oprit).

Het verschil tussen deze verschillende typen tegels zit hem in de manier van verwerken en de prijs per m².

Een 2 centimeter dikke keramische tegel moet gelegd worden in een volledig gestabiliseerde en harde fundering, dit is geen eenvoudige klus. De aanlegkosten voor dit type tegel zijn hierdoor relatief hoog en de aanleg dient door zeer ervaren verwerkers te gebeuren, echter de aanschafprijs van de tegel is relatief laag. Toch wordt er niet heel vaak voor de 2 centimeter tegel gekozen omdat de meeste verwerkers liever met een dikkere tegel werken.

Een 3, 4, 5 of 6 centimeter dikke keramische tegel kan eenvoudiger gelegd worden, namelijk in een gestabiliseerde ondergrond van zand/cement. Dit hoeft dus geen volledig gestabiliseerde, harde fundering te zijn. Er zijn ook verwerkers welke dit type tegel zelfs enkel op een zandbed straten, hiermee is het een zeer gemakkelijke tegel voor de verwerker.

Tot slot is er nog het verschil tussen volkeramisch en de combinatie van keramiek met beton. De keuze hiertussen is zeer persoonlijk en wordt vaak gemaakt op basis van kleur of prijs.

Leveranties

Hoe wordt mijn gebakken bestrating geleverd?

Nieuw gebakken stenen

Gestapeld op pallets

0% breukstenen

Uitzonderingen: Waal- en Dikformaat Hollands bont

Oude gebakken stenen

Handmatig gesorteerd en gestapeld op pallets

5% bruikbare breukstenen per pallet

(deze bevinden zich op de tweede laag van boven)

Uitzonderingen: Waal- en Dikformaat sierklinkers

* Losgestort leveren van oude gebakken stenen is mogelijk vanaf 150m². Echter raden wij losgestorte leveringen in eerste instantie af. Bij losgestorte leveringen kan een laag percentage breuk onmogelijk gegarandeerd worden. Daarnaast geeft gepalleteerd leveren een exacter inzicht in het aantal geleverde vierkante meters. Ook kunnen er zaken in de berg stenen zitten welke vrij zijn gekomen bij de verwijdering van de stenen op hun oude locatie, denk hierbij aan putdeksels, betonklinkers, ijzer, puin etc. Kiest u toch voor een losgestorte levering wordt er €2,- ex BTW in mindering gebracht op de vierkantemeterprijs.

Natuursteen

In Big Bags op pallets

0% breuk

Uitzonderingen: Scoria bricks, koperslaktegels, basalt tegels

- **Levering door heel de Benelux en Duitsland;**
- **Eigen transport en transportplanning;**
- **Korte termijn leveringen;**
- **Levering uit eigen voorraad;**
- **Gratis levering in Nederland bij bestelling vanaf 150 m² (eilanden uitgezonderd);**
- **Leveren kan al vanaf 15 m²;**
- **Zelf afhalen ook mogelijk bij ons afhaalcentrum.**
